Continuity

• A Safe Haven to work from during a cyber breach •

We are all potential victims of a cyberattack and with the threat landscape increasing in volume and complexity all the time, breaches are no longer a possibility – they are inevitable. When a breach occurs, it can bring an entire environment to a stop and this means that the processes and functions underpinned by the affected technology also stop. Recovering from an attack can take a long time. So how do you continue to do business during this time, when using the affected technology is not an option and your IT staff are busy dealing with the breach and not on achieving “business as usual”?

Overview

It's rare for any business to keep a secondary environment totally separate from their live systems, ready to switch over to, should the primary environment be compromised. Needless to say, the costs and management involved prohibit most organisations from considering such a measure. Even larger establishments with multiple locations struggle to cope with managing to continue impacted business functions, where the priority for the business as a whole is to contain the breach and isolate affected systems.

For Daisy however, providing such secondary facilities is just part of our business as usual activity – to keep our customers up and running during any eventuality.

Daisy can provide a clean technical environment for you and your workforce to continue to work from while your IT staff conduct a detailed investigation on the impacted environment. Taking a methodical and detailed approach to the investigation can help reduce the likelihood of a further attack occurring to the same systems in the same way in the future, so it is a critical undertaking, and one that requires “all hands to the pump” internally.

What does Safe Haven deliver?

Safe Haven can provide you with a fresh, untouched and uninfected environment from network through to desktop and servers with physical and logical segregation away from your infected infrastructure. Depending on the extent of the breach and the services required, these can be delivered to any of our UK business continuity centres, directly to your door, or to homeworkers.

Why Daisy Safe Haven?

Daisy has the business continuity infrastructure and expertise to deliver this service, with on and off-premise options that can address the nature of your breach.

- Industry-leader in providing alternative work space with short lead times
- Keep your business running while an investigation into the breach is undertaken
- Access to all relevant and associated technical equipment you need
- The ability to continue delivering support and communications to your customers during a breach
- Ideal as an additional service for customers who take eBackup or other data protection services from us, so we can quickly and easily roll-back to clean data

Why Daisy for business continuity and availability services?
